

Fortune 500 Financial Services Company

Introduction

One of the largest property and casualty insurance companies in the United States, this Fortune 500 financial services group needed a means of discovering sensitive data from its AWS sources and protecting it with masking.

Challenges

Previous discovery tools were largely column-based and not returning the required information. The organization needed a more robust PII discovery and masking solution for Snowflake, EMR, EBS, AWS S3, ThoughSpot, Dremio, RDS databases (MS SQL, Postgres, and DynamoDB), and ServiceNow.

Use Case

The financial group has selected PK Protect to scan AWS RDS databases—which are currently in migration from on-premises—for sensitive data. The solution will also be used to scan all cloud databases that are in place, as well as JSON files that are stored in S3.

Organization Profile

Size: Fortune 500

Industry: Financial Services

Results

PK Protect enabled the customer to get the data and results as per the requirements with minimized false data. Even while using custom expressions, PK Protect is able to deliver the correct results for the organization. Future plans include enabling masking to remediate sensitive files and databases.

About PKWARE

PKWARE offers the only data discovery and protection solution that locates and secures sensitive data to minimize organizational risks and costs, regardless of device or environment. Our ultra-efficient, scalable software is simple to use on a broad range of data types and repositories, enabling precise, automated visibility and control of personal data, even in the fastest-moving, most complex IT environments. With more than 1,200 customers, including many of the world's largest financial institutions, retailers, healthcare organizations, and government agencies, PKWARE continues to innovate as an award-winning global leader in data discovery, security, and compliance.
